

How to Plant Your White Oak Seedling

Common Name: White Oak
Latin Name: Quercus alba
Native Range: Eastern United States
Zone: 3 to 9
Height: 50.00 to 80.00 feet
Spread: 50.00 to 80.00 feet
Bloom Time: May
Bloom Description: Yellowish-green
Sun: Full sun
Water: Dry to medium
Maintenance: Medium
Suggested Use: Shade Tree, Street Tree
Flower: Insignificant
Fruit: Showy

Culture

Best grown in rich, moist, acidic, well-drained loams in full sun. Adapts to a wide variety of soil conditions with good drought tolerance.

Uses

Large shade tree, street tree or lawn tree. Needs a large space in which to grow

Planting Instructions

HERE IS YOUR NEW ARBORDAY SEEDLING

This tree is dormant now. With your care it will grow from a seedling to a beautiful tree. Keep the roots moist until planting.

Trees provide shade, natural beauty, food and habitat for wildlife, control soil erosion and produce fresh oxygen for all living creatures. They are nature's gift for all of us to enjoy.

Remember, trees need lots of space to grow, plenty of light and water. Avoid planting them where people walk, lawn mowers mow or where they will interfere with buildings, sidewalks, overhead wires and other trees.

IMPORTANT: PLANT IMMEDIATELY

Proper Planting and Care

- 1. Keep the roots moist and cool until planting**
- 2. Dig the hole twice as wide and as deep as the root area**
- 3. Set the plant so the root collar is just above the soil**
- 4. Cover the roots with a good quality soil and pack lightly - enough to stabilize the seedling**
- 5. Water once or twice weekly - depending on the amount of rainfall**
- 6. IMPORTANT: Do not fertilize for the first two years**
